

Lithium in the Universe: to Be or not to Be?*Monte Porzio Catone, November 18-22, 2019**editors: G. Cescutti, A. Korn and P. Ventura***TABLE OF CONTENTS**

<i>Index</i>	5
<i>Foreword</i>	8
Session I: Big Bang nucleosynthesis, nuclear reactions and early Universe	
E. M. Tursunov, S. A. Turakulov and A. S. Kadyrov <i>Reaction rates of the $\alpha+d$ direct capture process and primordial abundance of ${}^6\text{Li}$ within few-body models</i>	10
M. Gai <i>The interaction of Deuterons and Neutrons with ${}^7\text{Be}$ and the primordial ${}^7\text{Li}$ problem</i>	14
B. Davids <i>Measurements of nuclear reactions that create and destroy Li and Be during BBN</i>	20
K. Mori and M. Kusakabe <i>Big Bang nucleosynthesis with time-dependent quark mass</i>	26
G. J. Mathews, A. Kedia, N. Sasankan, M. Kusakabe, Y. Luo, T. Kajino, D. Yamazaki, T. Makki, and M. El Eid <i>Cosmological solutions of the lithium problem</i>	29
M. Kusakabe and M. Kawasaki <i>Chemical separation of Li^+ ions by primordial magnetic field before the Galaxy formation</i>	35
Session II: Lithium in stellar structure and evolution	
J. Bouvier <i>The lithium-rotation connection in young stars</i>	39
S. Cassisi, M. Salaris, S. Degl'Innocenti, P. G. Prada Moroni and E. Tognelli <i>Protostellar accretion and the cosmological lithium problem</i>	44

C. Abia, R. M. Cabezón and I. Domínguez <i>3D hydrodynamical simulations of a brown dwarf accretion by a Main-Sequence star and its impact on the surface Li abundance</i>	48
L. Izzo, P. Molaro, P. Bonifacio, M. Della Valle and P. Selvelli <i>Observations of ^7Be and ^7Li in classical Novae</i>	52
A. Heger and S. Woosley <i>Production of lithium in primordial supernovae</i>	58
R. de la Reza <i>On the super lithium rich giant star phenomena</i>	63
S. Cristallo and D. Vescovi <i>Lithium evolution in RGB and AGB stars</i>	67
Session III: Lithium in stellar clusters	
B. A. Twarog, B. J. Anthony-Twarog, C. P. Deliyannis and A. Steinhauer <i>Intermediate-to-low mass stars in open clusters and the evolution of Li</i>	74
E. Franciosini, E. Tognelli, S. Degl'Innocenti, P. G Prada Moroni and S. Randich <i>Lithium evolution in young open clusters from the Gaia-ESO survey</i>	80
N. Lodieu <i>The age of the Hyades from the lithium depletion boundary</i>	84
R. D. Jeffries, R. J. Jackson, C. Deliyannis and Q. Sun <i>Lithium in the young suns of Messier 35</i>	88
F. D'Antona <i>Lithium in the context of Multiple Populations in globular clusters</i>	92
V. D'Orazi and R. Gratton <i>Lithium and p-capture elements in globular clusters: implications for multiple populations scenarios</i>	98
N. Sanna, E. Franciosini, E. Pancino and A. Mucciarelli <i>Lithium abundances in globular clusters</i>	101
A.J. Korn <i>How stars in globular clusters reveal the depletion of the Spite plateau of lithium</i>	105
Session IV: Observations of Lithium	
A. Mucciarelli <i>Expalining the lithium meltdown in the dwarf stars using the red giant branch stars</i>	110
I. Negueruela, J. Alonso-Santiago, H. M. Tabernero, A. Marco, N. Castro and R. Dorda <i>Detection of lithium in massive stars</i>	114

D. Korcakova, A.S. Miroshnichenko, S. V. Zharikov, N. Manset, S. Danford, V. Votruba and N. Dvorakova <i>Mystery of Lithium in FS CMA stars</i>	118
D. A. García-Hernández <i>Observations of Li-rich giants in the Galaxy and in the Magellanic Clouds</i>	122
Session V: Lithium in the Milky Way and nearby galaxies	
F. Matteucci, V. Grisoni and D. Romano <i>Lithium and the chemical evolution of the Milky Way</i>	128
Deepak and B. E. Reddy <i>Lithium in the Galaxy: current status and contribution from the low-mass giants</i>	134
X. Fu <i>From the cosmological Li problem to the Galactic Li evolution</i>	138
R. Smiljanic <i>Lithium evolution in the Milky Way discs: the view using large stellar samples</i>	142
J. Meléndez <i>Signatures of stellar depletion on the Spite plateau</i>	148
G. Cescutti, P. Molaro and X. Fu <i>Lithium in the closest satellite of our Milky Way</i>	153
Session VI: Posters	
P. Colombetti and G. Gervino <i>Direct measurements of ${}^2\text{H}(\alpha, \gamma){}^6\text{Li}$ cross section at Big Bang energies and the primordial lithium problem</i>	157
V. Grisoni, F. Matteucci, D. Romano and X. Fu <i>Evolution of lithium in the Galactic discs</i>	163
E. Machado-Pereira and H. J. Rocha-Pinto <i>New candidates for chromospherically young, kinematically old stars</i>	167
T. Mishenina, C. Soubiran, C. Charbonnel, M. Katsova and B. Nizamov <i>Solar twins: Lithium abundance scatter</i>	171
S. Starrfield, M. Bose, C. Iliadis, W. R. Hix, C. E. Woodward and R. M. Wagner <i>Carbon-oxygen and oxygen-neon classical novae are Galactic ${}^7\text{Li}$ producers</i>	175
