

HACK100

editors: P. Bonifacio and P. Molaro

TABLE OF CONTENTS

<i>Index</i>	7
<i>Foreword</i>	10
Margherita's work and legacy	
P. Selvelli <i>Margherita Hack: a life for science</i>	13
P. Molaro <i>The problem of Lithium and the other Light Elements Deuterium, Beryllium and Boron</i>	22
S. Ferluga <i>The strange Case of Epsilon Aurigae</i>	28
G. Umbriaco, A. Bianchini, A. Pizzella, A. et al. <i>Margherita Hack's Astrophysics at the Asiago Astrophysical Observatory</i>	34
M. Messerotti <i>Solar radio observations in Trieste contributed to avert a nuclear war in 1967</i>	40
G. Catanzaro <i>Am Stars: Abundances, ages, pulsations, and binarity</i>	50
P. Bonifacio, L. Monaco <i>Feige 86: Gaia confirms its Horizontal Branch nature</i>	57
A. Wolter <i>A statue for Margherita</i>	61
Galactic archeology and formation of chemical elements	
E. Caffau <i>Searching for metal-poor stars</i>	68

J. I. González Hernández, D. S. Aguado, C. Allende-Prieto et al. <i>Early phases of the Galaxy from the chemical imprint on the iron-poor stars J0815+4729 and J0023+0307</i>	77
I. Vanni, S. Salvadori, Á. Skúladóttir <i>Are all metal-poor stars of second-generation?</i>	84
A. Bressan, G. Costa, S. Goswami, V. Grisoni, K. G. Shepherd, L. Silva, F. Addari, P. Marigo <i>Very massive stars chemical enrichment in extremely metal-poor galaxies</i>	91
L. Lombardo <i>CERES survey: Stellar parameters and chemical abundances of selected elements</i>	99
F.-K. Thielemann, K. Farouqi, S. Rosswog, K.-L. Kratz <i>Sources of r-Process Abundances</i>	105
M. Molero, D. Romano, M. Reichert, F. et al. <i>Chemical evolution of Sagittarius: the heavy elements Eu and Ba</i>	118
A. Vasini, F. Matteucci, E. Spitoni <i>Chemical evolution of radioactive elements in the Milky Way</i>	123
F. Matteucci <i>The chemical evolution of the Milky Way: a problem of Galactic archaeology</i>	127
E. Spitoni, F. Matteucci <i>The $[\alpha/Fe]$ bimodality in the Milky Way disc with chemical evolution models</i>	134
S. Taibi, G. Battaglia, R. Leaman et al. <i>Radial metallicity gradients of red giant stars in Local Group dwarf galaxies</i>	141
F. Z. Majidi <i>Characterization of YSOs with XSHOOTER</i>	147
A. Herrero <i>A personal perspective on the history of massive OB stellar spectroscopy</i>	154
G. Costa, C. T. Nguyen <i>Rotating stellar populations in NGC 1866: New PARSECv2.0 tracks with rotation</i>	167
A. Mucciarelli, D. Massari <i>The assembly history of the Local Group: the case of the Large Magellanic Cloud</i>	173
Exoplanets discovery and characterization	
A. Sozzetti <i>Planetary Systems Demographics: The View from High-Resolution Spectroscopy</i>	178
K. Biazzo & the GAPS Team <i>Characterization of exoplanet hosting stars within the GAPS program</i>	189

S. Benatti, S. Desidera & the GAPS Young Objects Team <i>Understanding the evolution of planetary systems with GAPS2</i>	195
L. Silva, R. Bevilacqua, L. Biasiotti, E. et al. <i>Climate and atmospheric models of rocky planets: habitability and observational properties</i>	203
Extragalactic Astronomy: Tracing the baryons- First Galaxies and their growth	
C. Peroux <i>The Baryon Cycle</i>	211
S. Salvadori, V. D'Odorico, A. Saccardi, Á. Skúladóttir, I. Vanni <i>First stars signatures in high-z absorbers</i>	215
A. Grazian <i>The contribution of high-z AGN to the Ionizing UV background</i>	221
O. Cucciati, G. De Lucia, F. Fontanot, G. Zamorani, B.C. Lemaux, L. Lubin <i>Galaxy and structure formation before the cosmic noon. The perspective with galaxy spectroscopic surveys</i>	227
B. Vulcani, B. M. Poggianti, A. et al. <i>Integral field spectroscopy allows us to distinguish among the different physical mechanisms affecting galaxies in the different environments</i>	233
R. Tripodi, C. Feruglio, F. Fiore, et al. <i>ALMA unveils an outflow and a stellar bulge in an isolated $z \sim 6$ QSO</i>	240
S. Maitra <i>Higher order clustering of Lyα forest</i>	247
Cosmology and fundamental physics	
S. Cristiani, K. Boutsia, G. Calderone, G. et al. <i>Spectrographs and spectroscopists for the Sandage test</i>	251
M. Signorini, G. Risaliti, A. Sacchi, E. Lusso, E. Nardini <i>Building the high-redshift Hubble Diagram with quasars</i>	259
P. Monaco on behalf of the Euclid Consortium <i>Mapping the Universe with slitless spectroscopy</i>	266
D. Milaković, C.C. Lee, P. Molaro, J.K. Webb <i>Methods for quasar absorption system measurements of the fine structure constant in the 2020s and beyond</i>	270
Breakthrough science enabled by future spectrographs	
S. Covino, S. Cristiani, J. M. Alcalá, et al. <i>CUBES: a UV spectrograph for the future</i>	281
C. Neiner <i>UV spectropolarimetry: a new tool for breakthrough science</i>	294
